CODEALPHA PYTHON INTERNSHIP

TASK 1 — Hangman Game

Objective: Create a simple text-based Hangman game where the player guesses a word one letter at a time.

Python Code

```
import random

words = ["python", "computer", "programming", "keyboard", "developer"]

word = random.choice(words)
guessed_letters = []
wrong_guesses = 0
max_wrong_guesses = 6

print("===== HANGMAN GAME =====")
print("Guess the word one letter at a time!")

while wrong_guesses < max_wrong_guesses:
    display_word = ""

    for letter in word:
        if letter in guessed_letters:
            display_word += letter + " "
        else:
            display_word += "_ "

    print("\nWord:", display_word)
    print("Wrong guesses:", wrong_guesses, "/", max_wrong_guesses)

    if all(letter in guessed_letters for letter in word):
        print("\nCongratulations! You guessed the word:", word)
        break

    guess = input("Enter a letter: ").lower()

    if len(guess) != 1 or not guess.isalpha():
        print("Please enter only one letter.")
        continue

    if guess in guessed_letters:
        print("You already guessed that letter.")
        continue

    guessed_letters.append(guess)

    if guess in word:
        print("Correct guess!")
    else:
        wrong_guesses += 1
        print("Wrong guess!")

else:
    print("\nGame Over!")
    print("The word was:", word)
```

Sample Output

```
===== HANGMAN GAME =====
Guess the word one letter at a time!

Word: _ _ _ _ _ _
Wrong guesses: 0 / 6

Enter a letter: p
Correct guess!
```
